

ABSTRACT OF THE DISCLOSURE

Sub
at 7

A dish drainer and tray system is disclosed which provides reduced space requirements for packaging, shipping, display and storage. The tray may be compacted into storage size which allows it to fit in the
5 drainer, thereby allowing the drainer rather than the combination to determine the space requirements. In one embodiment, the tray folds about one or more live hinges, and in a second embodiment the tray rolls and includes a closure to maintain it in the rolled position. A particularly preferred present invention also includes a detachable silverware
10 compartment that drains directly into the sink and which can be stored with the tray in the drainer.
